

Acellerate GF

At a Glance

- PRP is old technology... Growth Factors are new!
- Contains super dose of growth factors
- Promotes super recruitment of stem cells (bloodborne)
- Concentrates growth factors to help stem cells promote the growth of specific types of cells
- Accelerates development of new blood vessels
- Accelerates bone regeneration
- Initiates new connective tissue
- Can be a powerful stand-alone treatment or combined with stem cell therapy

Our **Acellerate GF** plasma concentrate (*not another PRP product*) contains a super dose of growth factors and is a super recruiter of bloodborne stem cells in high concentration to promote growth of specific types of cells, accelerated bone regeneration and development of new blood vessels, and initiate new connective tissue.

Acellerate GF has an overall **high growth factor concentration and liquid-fibrin matrix**, the key benefit of which is to promote accelerated proliferation of growth factors for more effective and rapid healing, **without the pain** experienced on injection with PRP. It is a natural platelet concentrate used in regenerative medicine that requires only a small amount of the patient's own blood to initiate the healing process, and is a fast-acting and highly effective way to non-operatively treat certain injury to soft tissue, tendons, ligaments, muscles and joints, and nerves.

Acellerate GF was developed in an actual medical practice, where our team of physicians and technologists were able to see results and optimize product efficacy.

Acellerate GF can be combined with your Stem Cell treatments, or be used as a non-painful, Alternative/Stand-Alone Regenerative Therapy for the effective treatment of musculoskeletal injuries and conditions, neuropathy and chronic non-healing wounds.

Acellerate GF Protocol (Standalone Therapy)

This protocol has been developed to give maximum benefit to the patient within a short period of time. We recommend that patients are treated with **Acellerate GF™** treatments weekly for 3 weeks, or once every 2 weeks over a six-week period, or four times over 8 weeks. The Practitioner should schedule treatments based on the severity of the injury or condition, as well as progress during treatment.

The Healing Power of Acellerate GF™

Indications

- Musculoskeletal Injury
- Neuropathy
- Chronic Non-Healing Wounds

Orthopedics & Sports Medicine

- Knee Injuries
- Hip Injuries
- Elbow Injuries
- Shoulder Injuries
- Back Injuries
- Osteoarthritis

What is Acellerate GF?

Acellerate GF™ is an injectable concentrate of platelets and growth factors (GF), which recruit stem cells, along with proteins and fibrinogen in high concentrations for the effective treatment of (i) musculoskeletal conditions and orthopedic injuries, (ii) peripheral neuropathy, and (iii) chronic non-healing wounds. Acellerate GF acts as a catalyst for the natural and rapid healing of soft tissue, tendons, ligaments, muscles and joints, and nerves.

Acellerate GF both activates and aggregate platelets prior to injection using a proprietary solution that:

- Promotes rapid healing with minimal to no pain
- Harmless to the patient, and uses patient's own blood and natural substances found in the bloodstream
- Stimulates accelerated tissue repair and regeneration, without risk of allergic reaction, disease transmission or infection

Acellerate GF can be used as a complete standalone therapy or as a highly effective complement to stem cell treatments.

The Power of Platelets

Platelets are activated by damaged tissue. They initiate the clotting cascade and kick-off the healing cycle.

Upon activation they release natural anabolic GROWTH FACTORS

- Injury healers, not pain killers
- In concentration, they lower the pain level

- They work quickly
- They can be a "complete" treatment

Growth Factors

Growth factors do the "heavy lifting". They start aggressive healing, stimulate cellular growth, form new blood vessels and attract stem cells.

- Platelet derived GF
- Transforming GF
- Basic Fibroblast GF
- Vascular Endothelial GF
- Epidermal GF
- Nerve GF

Stem Cells

Referred to as the body's "master cells," stem cells can become any type of new tissue. They have the potential to regenerate new tissue, not just mask symptoms.

The Benefits of Combining Acellerate GF & Stem Cell Therapy

- It provides a greater variety of treatment options to the patient, taking into consideration the affordability
- Acellerate GF treatments prepare the joint to receive the stem cells, increasing adherence
- A post-stem cell injection of Acellerate GF can maximize the effectiveness of the stem cells
- Patients are willing to opt for the addition of Acellerate GF to their stem cell therapy in order to maximize their results
- Offering this combination approach will help set you apart from nearby practitioners

TREATMENT CYCLE for patients requiring aggressive healing to avoid surgery.

Combining Plasma Solutions & Stem Cell Therapy

WEEK 1

Initiate treatment with injection of Acellerate GF. This kick-starts the healing process and forms a matrix for stem cell adherence.

WEEK 2

Inject Stem Cells

WEEK 3-4

Inject Acellerate GF as a post stem-cell therapy to boost stem cells activity.

WEEK 6-8

Evaluate progress of patient to determine if additional Acellerate GF treatment is needed to achieve desired outcome.

- Provides better outcomes for patients
- Increases patient satisfaction and compliance
- A more cost-effective treatment
